

ANNUAL IMPACT REPORT

January 2026 | Prepared for Crescent Pharma

THANK YOU TO OUR CORPORATE DONORS

On behalf of the Partnerships Team at IHP, thank you for your invaluable support throughout 2025. This has been a year of unprecedented pressure for the humanitarian sector, with significant aid cuts tightening budgets across the board. Yet even as challenges grew, so did the need for quality healthcare—and thanks to you, IHP was able to continue delivering it.

This year, we marked IHP's 20th anniversary at a Humanitarian Reception at Buckingham Palace, hosted by His Majesty the King and Her Majesty the Queen, where we highlighted our disaster response work and the vital support of the UK and EU pharmaceutical and healthcare sector.

In 2025, we expanded into Sierra Leone and Zimbabwe and launched the Sustainable Healthcare Initiative in Zanzibar with HPIZ, strengthening healthcare systems through targeted, time-bound activities beyond product donations alone.

Even amid tightening budgets, our partners ensured a steady flow of products wherever needs arose, and we are deeply grateful for their continued support.

Other key milestones for IHP included our first-ever vaccine donation, delivering free Hepatitis B

vaccines to 45,000 patients in Ukraine and North Macedonia; a fourfold increase in cold-chain shipments expanding access to oncology treatments; and record-breaking produce-to-give donations supporting rapid disaster response.

As we look toward 2026, we remain committed to expanding healthcare access and championing best practices in medical donations. We hope this report offers a clear view of the impact you have made—the lives transformed, the communities strengthened, and the gratitude shared by the organisations and patients who received these vital medicines and supplies.

Thank you for your continued partnership and trust in IHP.

Lily Jones-Herbst
Partnerships Manager

20 COUNTRIES

International Health Partners shipped medicine and medical supplies across 20 countries in 2025, covering Africa, the Middle East, Central America, the Caribbean and the Balkans

3.1 MILLION

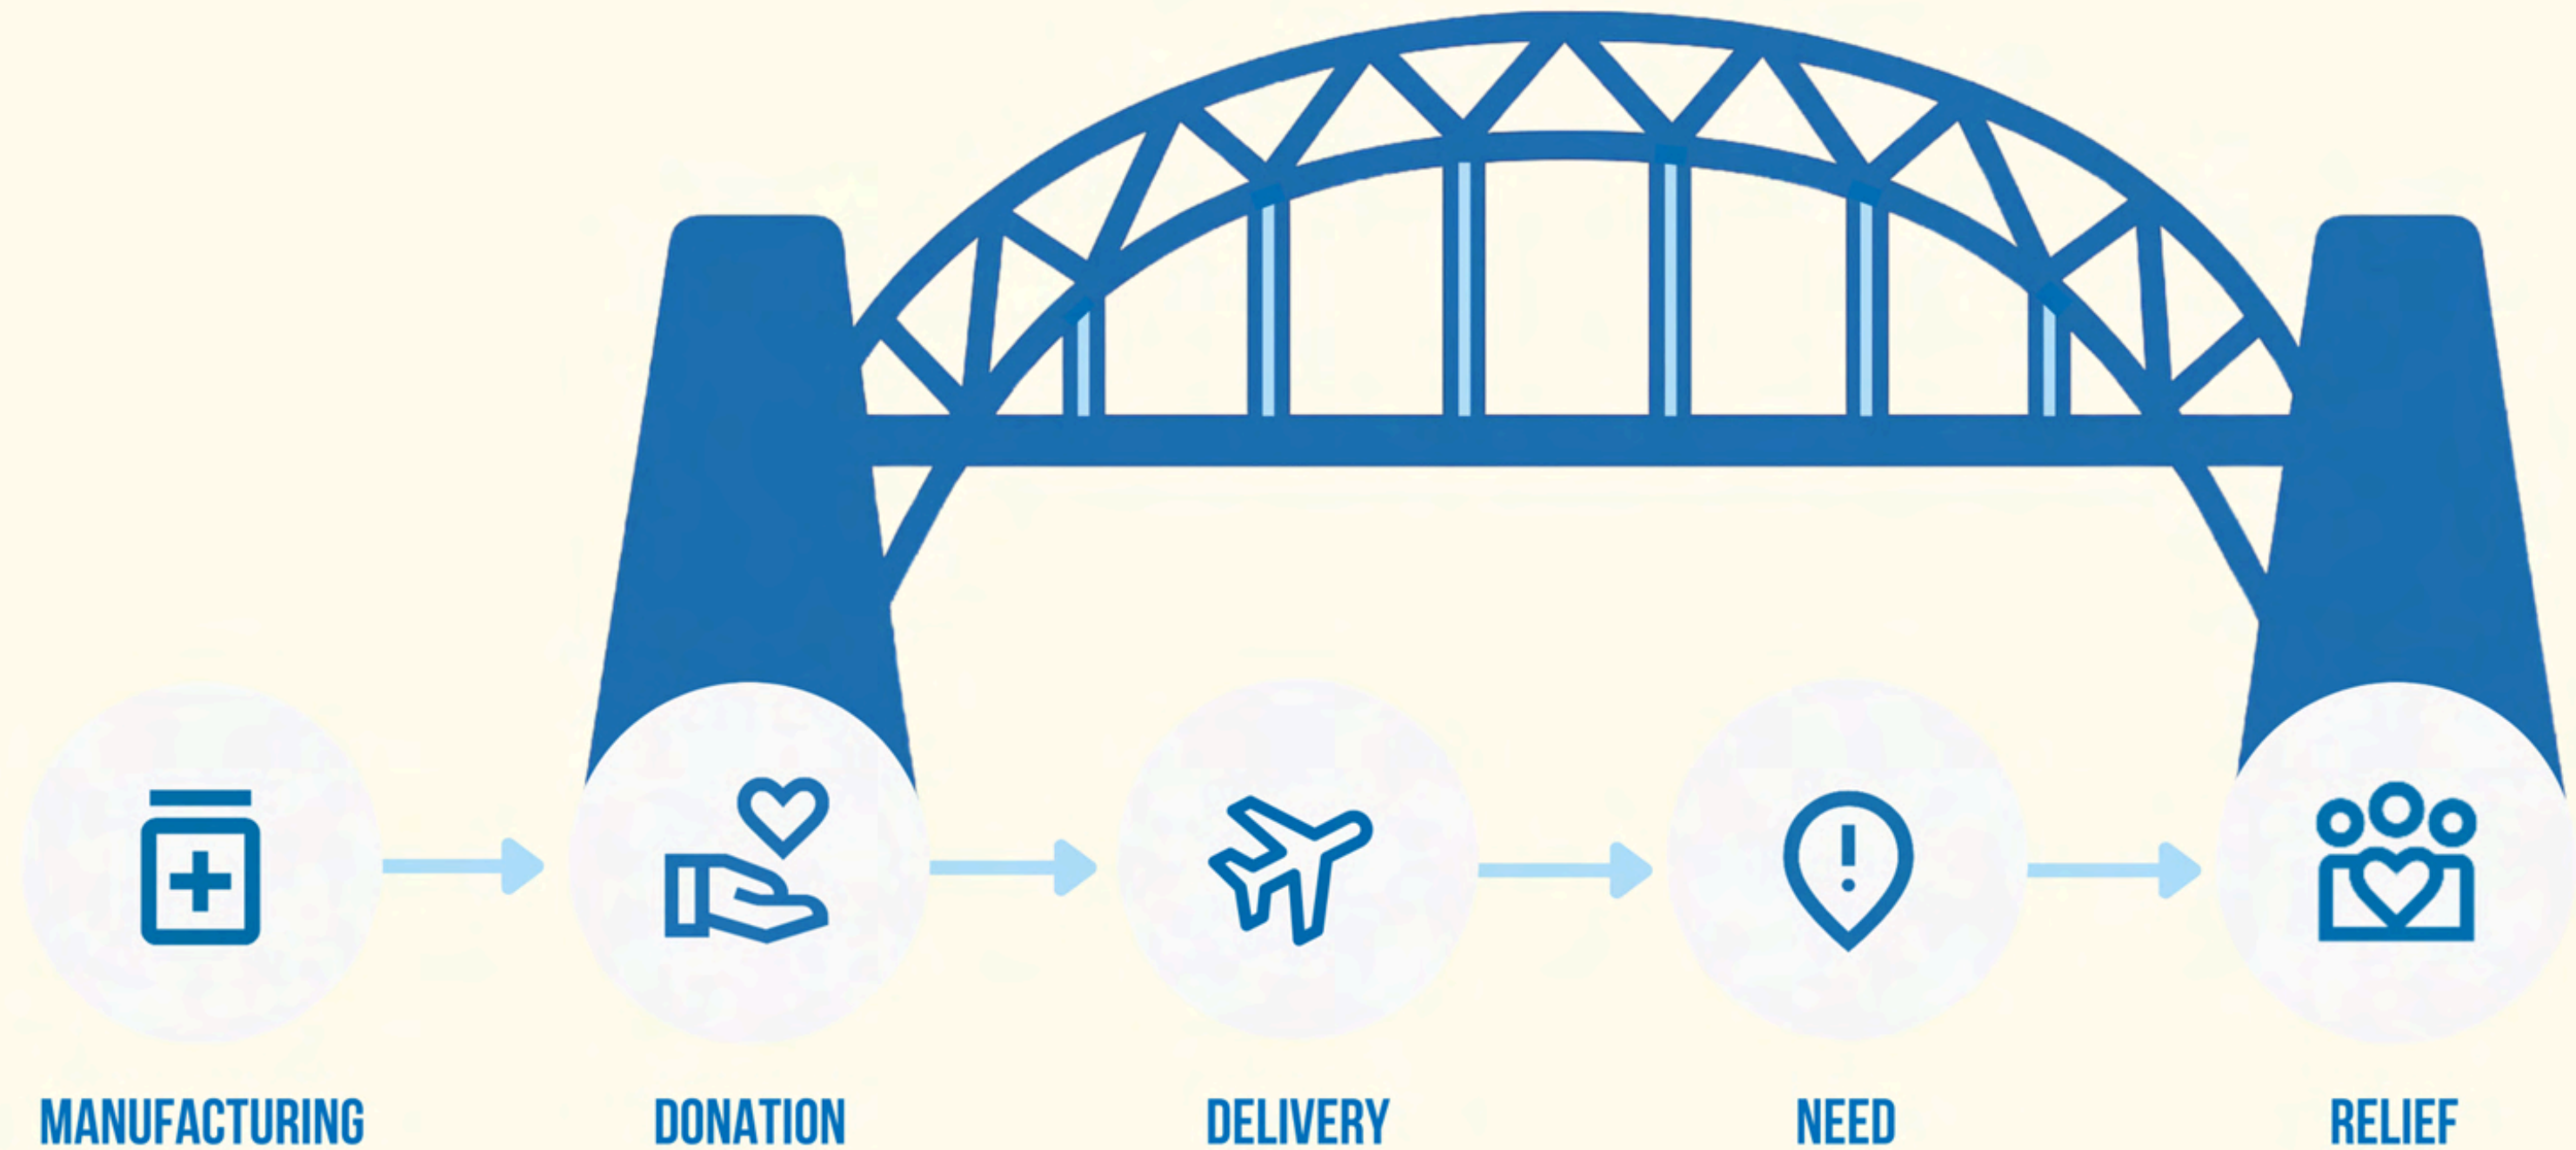

In 2025 IHP supported more than three million patients globally. Providing healthcare support across a broad range of needs, from primary health care through to cancer treatment.

£16.8 MILLION

Together with the support of our partners, we donated over £16 million worth of medicines and medical supplies to vulnerable communities around the world

THE IHP PROCESS

OUR VISION: THE BRIDGE

2026

This year has underscored both the urgency and the complexity of IHP's mission. As global demand for essential medical products continues to grow, the systems that support access—funding, supply chains, and operational capacity—have become increasingly strained. In this challenging environment, IHP's role as The Bridge has never been more vital.

Throughout 2025, we strengthened what defines us: our ability to connect the healthcare industry with trusted in-country partners so that life-changing treatments reach people affected by conflict, crisis, and fragile health systems. Acting as an expert, neutral intermediary, we ensure every product we facilitate is appropriate, safe, and responsibly delivered—turning intent into impact by navigating the risk and complexity that sits between supply and need.

Our impact this year is reflected not only in the volumes of medicines delivered, but also in the partnerships deepened, systems strengthened, and strategic clarity gained. These foundations—often invisible but essential—enable us to keep operating where the need is greatest.

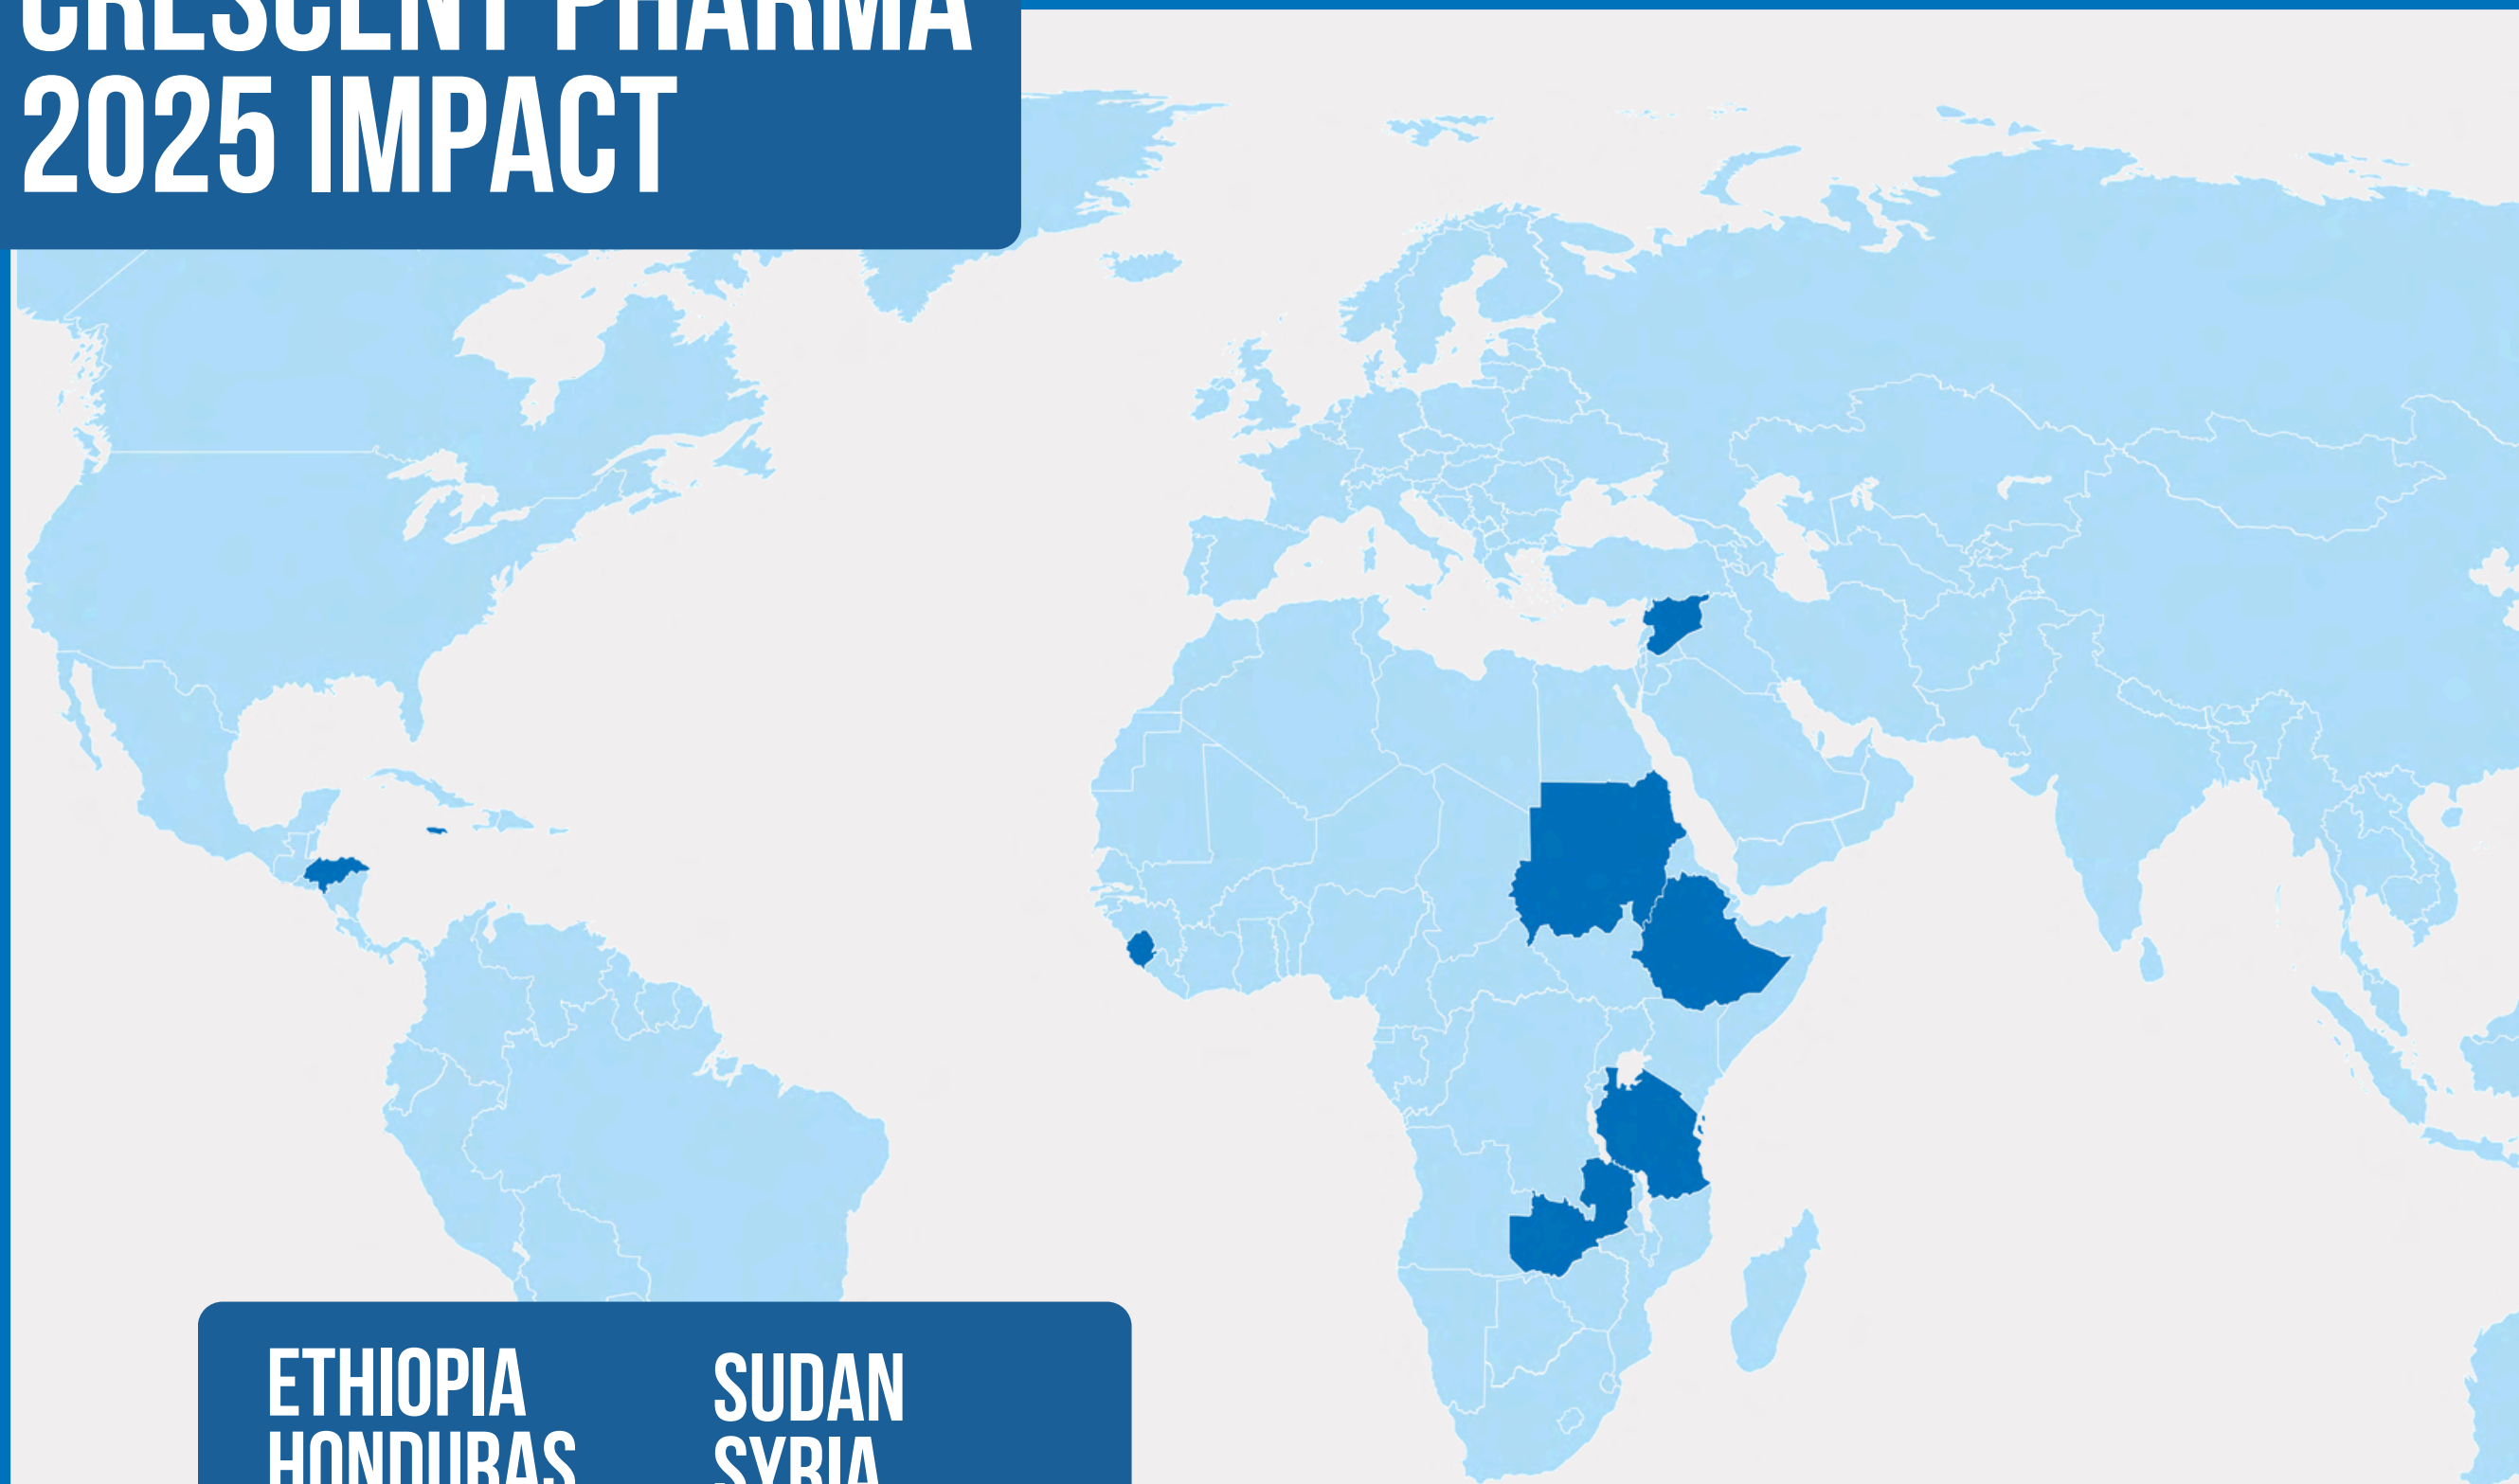

As global health challenges become more intricate, the world needs credible organisations capable of bridging divides and enabling collaboration. Through a year of significant review and organisational reshaping, we have reinforced that bridge, positioning IHP to continue delivering access to healthcare for those who need it most.

IHP's strategy this year focuses on strengthening our identity as the Bridge between product donors and implementing partners, with the focus on maximising the Flow of product across the IHP Bridge in order to reach those in greatest need. This is a return to IHP's founding USP.

As part of this, IHP is expanding its operations into the EU (following Brexit) to restore and expand our ability to receive, process, and export medicines in and from Europe – unlocking partnerships and access that had previously been restricted. Our registration in Europe will enable us to deepen our impact and extend our reach. We have submitted our EU Charity and WDA license applications, and will soon be processing shipments from our Netherlands warehouse. We welcome our corporate donors with EU presence to support us in this journey.

Thank you for your continued support and partnership.

OUR PARTNER

Our partner, Medical Teams International, continues to provide healthcare services in Nyarugusu and Nduta refugee camps, covering a range of services including primary healthcare, Non-Communicable Diseases (NCDs), Mental Health and Psychosocial Support (MHPSS), Reproductive and Child Health (RCH), HIV/TB, and nutrition services.

The donation contained medicines for treatment and management of NCDs, which, upon receipt and distribution to clients, contributed to the improvement of healthcare service delivery and the health status of the patients reached.

The NCDs medicines received from IHP played a vital role in improving the lives of patients by managing symptoms, preventing complications, and enhancing overall well-being.

With consistent access to these essential medications, patients experienced better control of their conditions, and a renewed ability to participate in daily activities. The impact extended beyond health, it restores hope, dignity, and quality of life.

“This donation came at the right time, when our major program funded by the United States government was suspended. The availability of these medicines at this critical time is essential to minimize service disruptions, promote adherence, and improve health outcomes for the people we serve.” – Debora Niyeha, Medical Teams Tanzania Country Director.

SIERRA LEONE

**OUR IN-
COUNTRY
PARTNER**

Maternal and under-five mortality remain major global health challenges, with the greatest burden in low-income countries.

In 2023, over 700 women died every day from pregnancy-related causes, over 90% of them in low-income settings (WHO), while more than 13,000 children died daily, mainly from preventable infectious diseases (UNICEF). These losses deepen poverty and reduce opportunities for families and communities (Reproductive Health).

IHP is responding by delivering essential, high-quality medicines and supplies through trusted local partners. This work is critical in Sierra Leone, where maternal mortality remains among the highest globally—around 350 deaths per 100,000 live births (World Bank). Limited access to essential medicines, trained staff and adequately resourced facilities means treatable complications often become fatal for mothers and young children.

IHP provides medicines that prevent and treat leading causes of maternal and child deaths, including postpartum haemorrhage, infection and anaemia. This project expands that support through maternal health kits containing tools for urgent childbirth care, alongside improved coordination of medicine supplies.

SIERRA LEONE

54 EHPS

worth £151,875 were
shipped to Sierra Leone

43,200 PATIENTS

supported thanks to our
EHP donors

Access to essential medicines in Sierra Leone continues to be shaped by geographic, economic, and supply chain limitations. These challenges contribute to delays in treatment, limited continuity of care, and heightened vulnerability among priority populations such as pregnant women, children, and individuals with chronic conditions.

The broader health system is also impacted by the high burden of preventable illness. Conditions such as infection, maternal complications, malaria, and sickle cell disease remain prevalent, increasing the demand for reliable access to medicines.

This shipment was distributed as part of ongoing efforts to strengthen access to healthcare services across Sierra Leone. The medicines were distributed to a total of 23 health facilities across 10 districts, contributing to lower maternal and newborn mortality, improved management of chronic diseases, more reliable access to essential primary care medicines, and a stronger, more responsive health system capable of serving diverse geographic populations

David attended the remote medical outreach in Gbongboma, as his son had been struggling with a fever, coughing, and had been experiencing sleepless nights. After the visit, he finally felt hopeful. “My son is sick, and that is why I am here at the outreach. Whenever we come here, they always give us good [treatment].”

JAMAICA: HURRICANE MELISSA RESPONSE

KEY FACTS

1.5 million people affected, including children, pregnant women, and those with chronic conditions ([OCHA](#)).

5 major hospitals severely impacted and many rural clinics damaged or without power ([PAHO](#)).

30,000 people displaced and 60% of the island without power, disrupting access to care, medicines, and water ([Project Hope](#)).

“People described Hurricane Melissa as if a tornado was over their heads for eight hours. Lives were turned upside down in a matter of hours. It’s going to be a long road to recovery for many people here. The situation in some areas is beyond desperate. People have lost everything. This is some of the most horrific hurricane damage you can imagine.

People are delivering babies in hospitals with no diapers in stock and very little medical supplies to speak of. Buildings are damaged and there’s no electricity. Health workers have been working for days with no rest. They are beyond exhausted and in desperate need of mental health support, but they continue to work because they know their patients need them. Now we must have their backs. In hospitals, staff are working for days at a time, despite losing their own homes. Yesterday, the head nurse at one hospital broke down when speaking with us but told us, ‘I just have to keep going.’” –Christine Lathrop, Senior Program Officer, Project HOPE

JAMAICA: HURRICANE MELISSA RESPONSE

On 28 October 2025, Hurricane Melissa made landfall in Jamaica as a catastrophic Category 5 storm, causing widespread destruction and overwhelming the country's health system. Over 1.5 million people, half the population, were affected, with critical infrastructure damaged, hospitals impaired, and access to clean water disrupted ([OCHA](#)). Medical needs continued to grow, while existing medical product dwindled.

Significant public health threats emerged in the aftermath of Hurricane Melissa, driven by widespread water contamination, accumulated rubbish, and inadequate sanitation ([UNICEF](#)). Stagnant water and uncollected waste increased vector-borne disease risks, particularly dengue, with fogging operations unable to meet the scale of need.

International Health Partners urgently responded by supplying **63 Essential Health Packs (EHPs)** for delivery via our trusted partner Project HOPE.

Thanks to our EHP donors and the pre-positioning of medicines we were able to support over **50,000 people** with essential medicines.

Our EHPs are portable, pre-packed kits of essential medicines designed to support primary healthcare delivery in crisis settings. Each kit functions as a mobile pharmacy including antibiotics, analgesics, anti-inflammatories, and anti-hypertension medicines.

63 EHPs

worth £164,236 were shipped to Jamaica

50,400 PATIENTS
